VEDANT VYAWHARE

Backend & Full-Stack Software Engineer (Node.js / MERN) | Final Year B.Tech CSE

vedantvyawhare2000@gmail.com | +91 9420438006 | Linkedin/vedant-vyawhare | GitHub/Vedant24v | Portfolio | CodeChef

SUMMARY

Final Year B.Tech CSE student and backend-focused full-stack developer (Node.js, Express, PostgreSQL, MongoDB) with production experience building broker/trading integrations, automated data pipelines, and layered service architectures. Proven ability to own end-to-end backend delivery, from API design and database schema to testing, cloud deployment, and reliability. Certified in OCI, Python, SQL, and Cloud.

EDUCATION

B.Tech, Computer Science Engineering, MIT-WPU, Pune | CGPA: 8.5 / 10 2023 - 2027

EXPERIENCE

SDE Intern | Atypical Technologies Pvt Ltd (APT) July 2026 - Present

Node.js, Express.js, PostgreSQL, REST APIs, AWS S3/EC2, Jest, WebSockets, Redis, Cron

- **Engineered 10+ brokerage API workflows** (authentication, quotes/LTP, orders, order book, trade book, holdings, positions, limits) for a Node.js/Express trading backend; **7 workflows verified live**.
- **Automated market-technical snapshot generation** across **5 instruments x 8 timeframes (40 combinations per run)** using cron-scheduled jobs, with API response validation and AWS S3 archival.
- **Refactored controllers into a layered validator, service, and helper architecture**, decoupling business logic from route handlers while preserving existing API behavior.
- **Built Jest unit and integration test suites** for authentication, broker mappings, and error scenarios, adding regression coverage across refactored modules and live integrations.
- **Delivered end-to-end backend infrastructure** spanning REST APIs, WebSockets, PostgreSQL, and AWS S3, supporting real-time trading and market-data workflows in production.

PROJECTS

Repox - AI Codebase Explanation Generator | Next.js 15, FastAPI, Groq, Mermaid.js June 2026

GitHub: Vedant24v/Repox Live: repox-alpha.vercel.app

- Built a full-stack tool converting a repository ZIP into a personalized, multi-level tutorial, combining a Next.js 15 frontend with a FastAPI backend and Groq Llama 3.3 70B for LLM-assisted content generation.
- Designed a heuristic static-analysis pipeline detecting 10+ languages and frameworks (React, FastAPI, Django, Express), mapping file relationships and API routes, and flagging likely credential leaks via pattern-based secret scanning.
- Generated deterministic Mermaid.js architecture, user-flow, repo-map, and ERD diagrams; packaged evidence-graded tutorials as downloadable ZIP files.
- Deployed the frontend on Vercel and backend on Render with environment-separated configuration for production use.

TaskFlow - Full-Stack Task Management App | MERN, JWT, Vercel March 2026

GitHub: Vedant24v/taskflow Live: taskkfloww.vercel.app

- Built a production-grade, Jira-style Kanban board with JWT authentication, role-based data isolation, and drag-and-drop task management (Not Started, In Progress, Completed) using @dnd-kit.
- Designed a RESTful MERN backend with Mongoose schemas and Express middleware, with serverless deployment on Vercel supporting full CRUD for tasks, users, and team members.
- Implemented JWT refresh-token authentication with bcryptjs password hashing, per-user data isolation, and environment-separated configuration for local and cloud deployments.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, Python, C++, C, SQL
- **Backend & Web:** Node.js, Express.js, React 18, Next.js, REST APIs, FastAPI, JWT Authentication, WebSockets
- **Databases:** PostgreSQL (Prisma), MongoDB (Mongoose), SQLite, Redis, Qdrant
- **Cloud & DevOps:** AWS (S3, EC2), Oracle Cloud Infrastructure (OCI), GCP, Vercel, Render, Docker, Git, GitHub, CI/CD
- **Testing & Other:** Jest, Postman, LangChain, RAG Pipelines, OOP, DBMS, DSA

CERTIFICATIONS & ACTIVITIES

- Oracle Cloud Infrastructure 2025 AI Foundations, Google Cloud DLP, Google Cloud Innovator
- 250+ problems solved on CodeChef; HackerRank SQL (Intermediate) and C++ (5 Stars); MyCaptain Python
- SIH'24 and SIH'25 Nominee, Smart India Hackathon internal rounds at MIT-WPU; Member, Google Developer Student Clubs (GDSC) and RIDE Cell
